**Abstract:** - Our initiative aims to optimise online access to government resources, reduce the cost of accessing them, streamline administrative procedures, boost time-scales and increase transparency and responsiveness. This Application allows e-services access to all government foundations. Many citizens are currently facing the dilemma of how to apply for pan cards, Udyog-Aadhar, passenger services, etc. In our project, we create a portal that enables the use of a website or smartphones to support both government programmes at your doorstep. The bulk of the Indian population is now a day young people who are technologically competent using smartphones, ipads, PCs. Right now, it is necessary because of the time restrictions that go online. We are here to help the public to move forward with our shift of skills in India. We are building a portal in our project to allow users to log in to our site, pick the alternative they needed once a feature is resolved and they can fill in the form and upload document and send it to the administrator. Admin can validate the document and bill for their services and continue. This programme customer can quickly access those government services for that programme.

**Keywords:** *Pan Card, Driving Licence, Citizenship, Visa.*

### **I INTRODUCTION**

By 2010 many of them had experience of sitting together at long slow moving queue for hours to complete the processing process as people of India applied for public services. And after joining the office, the nominee had to face the unreasonable and dismissive conduct of the handling concerned. Harrowing history has not stopped with office production. Thanks to manual sorting, authentication often took a very long time and was another painful job to send the paper to the resident. About the Delivery Method of Government Paper.

The government record delivery system is an internet portal provider of citizens' e-services that include a pan card, a driving licence, a visa, etc. and business facilities. Citizen e-services is a panel where people do not have to attend government offices for issuance of pan-card, driving and passport services, etc. You can use them in your workplace or in the comfort of your house.

A organisation needs such resources to work smoothly. Business services are those that are given to the corporate enterprise for its needs. Company services include the Services of Udyog Aadhaar etc. Udyog Aadhar is a certification from the Government, and is issued with a

certificate of approval and a single number for certifying small / medium companies or companies. Shared data e-services panel offers MPCB services. The Maharashtra Pollution Control Board in the state of Maharashtra operates a number of environmental regulations.

### **II. ADVANTAGES AND RELATED WORK**

#### **A. Advantages**

##### **1. Reduce Overhead of User:**

User do not need to go through the long process of documentation.

##### **2. Saves time:**

User do not need to government office if any query occur.

##### **3. Reduce Paper work:**

As getting document is online process so paper work will be reduces.

##### **4. User friendly environment:**

Any users don't know about this process then also he/she can apply for document with help of agent panel.

##### **5. Easy to get digital document:**

User can download the readily document from the portal.

**AND ENGINEERING TRENDS**

**B. Related Work**

**2.1 Project Passport Seva (year of publication: May 2016)**

One of the most essential identification papers for people {PASSPORT-issued by the Ministry of External Affairs, Government of India (GoI). This is a sovereign law which includes stakeholders in the country's large demographic and socio-economic sectors. Globalization has also intensified the need for passport holdings. The sensitivity, the importance and relevance of passports can be illustrated from the fact that the younger applicant was 1 day old and the older applicant was 115. This category encompasses people from both races, different educational and social fields. As a result, in order to address the need for a wide variety of stakeholders and provide government services through electronic media, GoI launched the National E-Governance Plan (NeGP) on 18 May 2006, covering 31 of the mission-mode projects (MMP) and Passport Seva Project (PSP) as the most successful NeGP project. In 2008, MiAE awarded PSP to Tata Consultancy Services Limited (TCS), the country's leading IT group, through a competitive public procurement process. This project was carried out using a PPP model; in which the sovereign act of passport grant remains with GoI and TCS is responsible for the production and maintenance of application applications. The transition entails drastic and profound changes in the way passport applications are handled and applicants serviced to date. MEA has not only streamlined the process, but has reengineered the whole process. Government Record Management System is not only an advance from paper-based management to the IT-managed software-based processing, but a move to service quality that is unheard of at any public agency in India. PSP was introduced with the vision of "providing people with passport services in a timely, open, more accessible, more

secure and convenient atmosphere through effective and dedicated procedures, educated and empowered workforce."

**2.1.1 Document benefits**

- Avoids manual passport scanning.
- Provides free passport submission.
- E-banking is open.
- Citizens' therapy services are coordinated.

**2.1.2 Document weaknesses**

- For the further issuance of the visa, the claimant must visit the seva kendra (psk) visa.
- Applicants must pay extra for obtaining passport updates. i.e. for the monitoring of passports.
- Comparatively nuanced mechanisms for citizens' comprehension.
- Phase period usage.

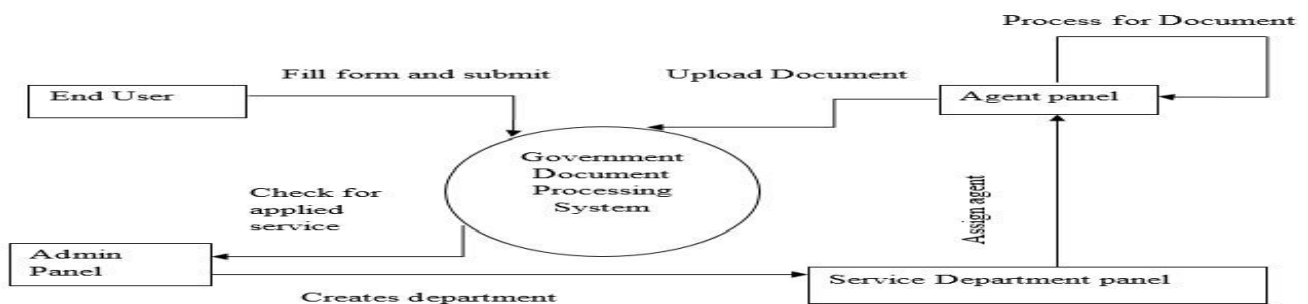

**2.1.3 How to solve the problems listed in the text**

- Government Paper Management System (GDPS) provides online management through the Internet.
- No need to visit some seva location, therefore.
- The applicant's dosage doesn't have to pay more for updates of records, instead.
- GDPS also sends notice by mail to candidates and sms.
- GDPS offers a user-friendly environment.
- Method produces documentation in a timely fashion.

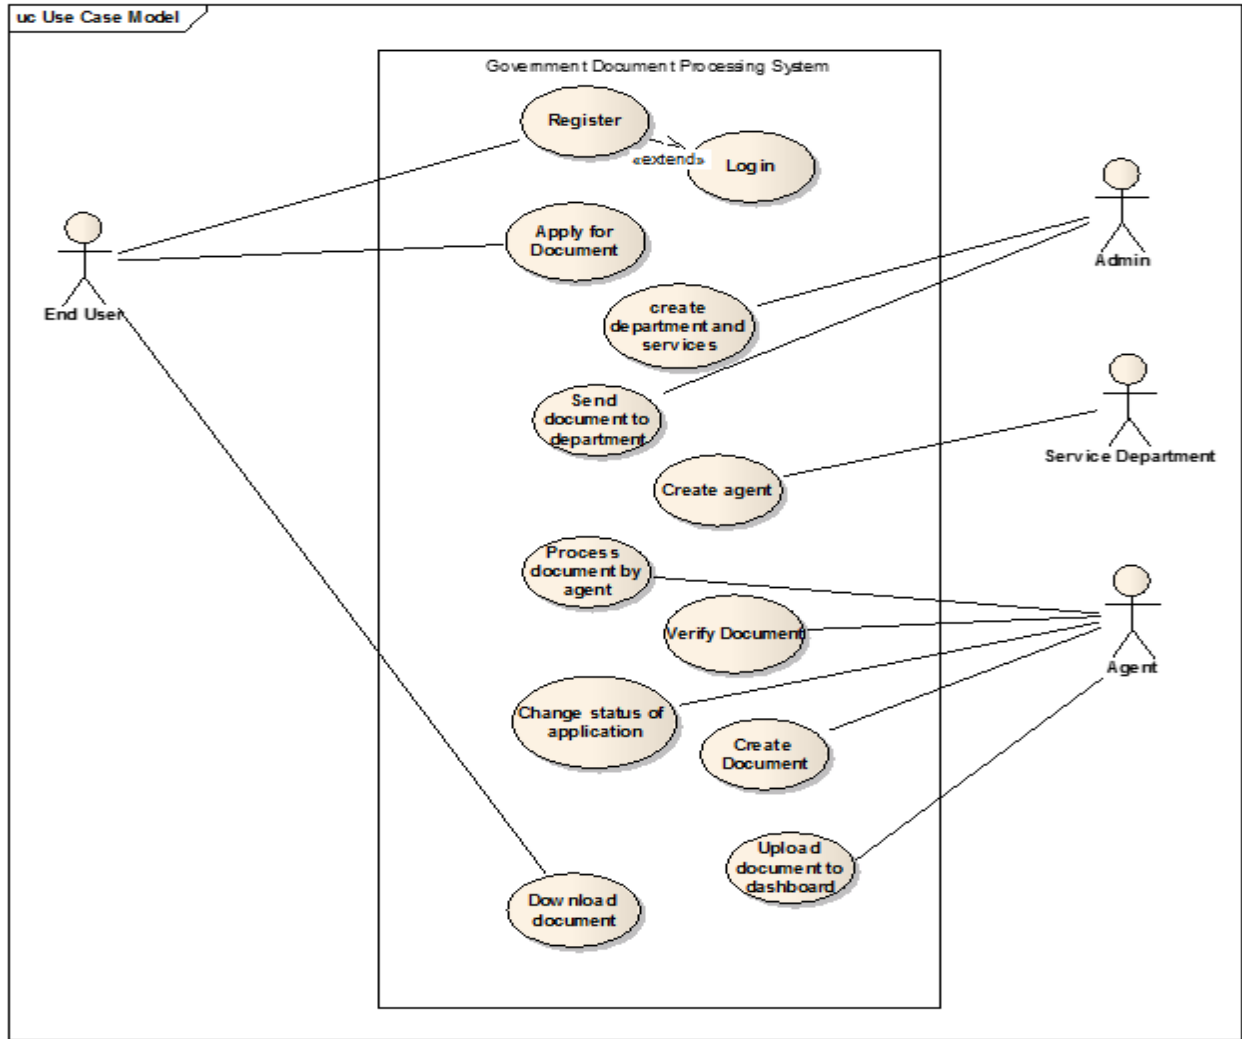

**2.2 Summery**

The paper above and related research performed on the subject of the Record Management Method is shown in this chapter. Some previous systems are stable and running effectively, but some limitations, such as cost and time usage, are essential.

<b>Age Proof Document (Select Any One)</b> <input type="text" value="SSC Certificate"/>	<b>Upload Age Proof Document</b> <input type="button" value="Browse..."/> No file selected.	
<b>Address Proof Document (Select Any One)</b> <input type="text" value="Passport"/>	<b>Upload Address Proof Document</b> <input type="button" value="Browse..."/> No file selected.	

### V.CONCLUSION AND FUTURE SCOPE

Therefore, we infer that our modules has been successfully completed by delivering the same online portal for citizens' e-commerce, enterprise resources and open data services. We complete our remaining modules in the next half and use test cases to verify if the device operates correctly.
